

Wireless Sensors for the measurement of dissolved oxygen in aquaculture plants

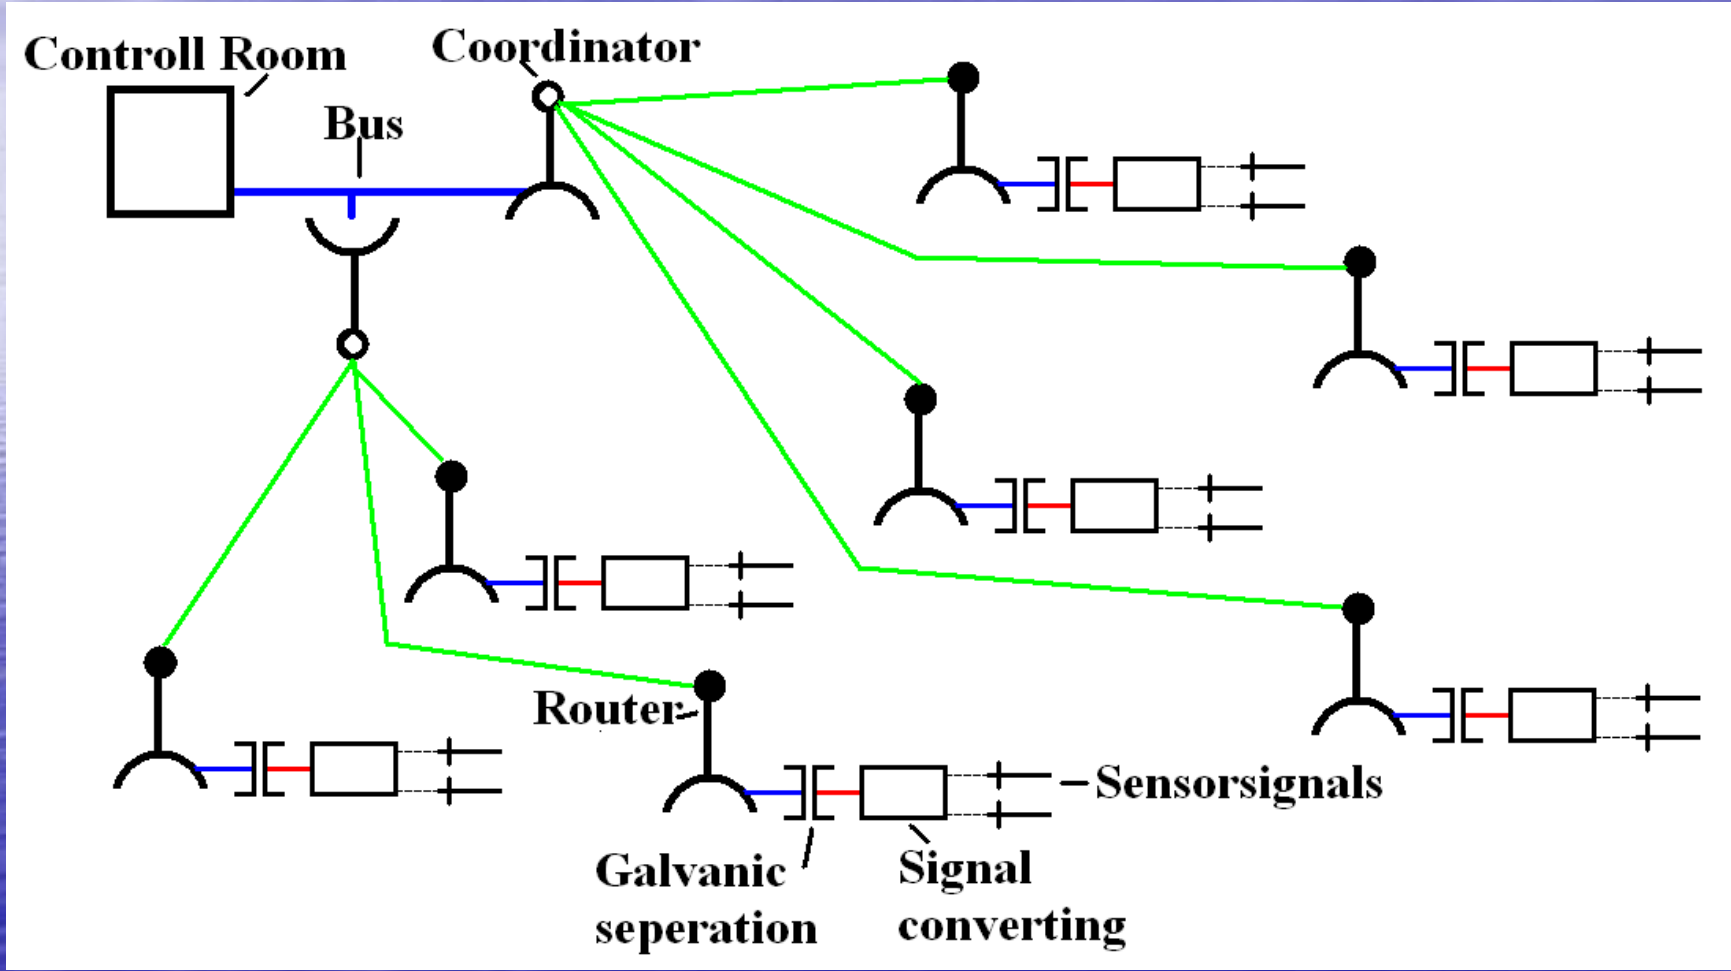

Agenda

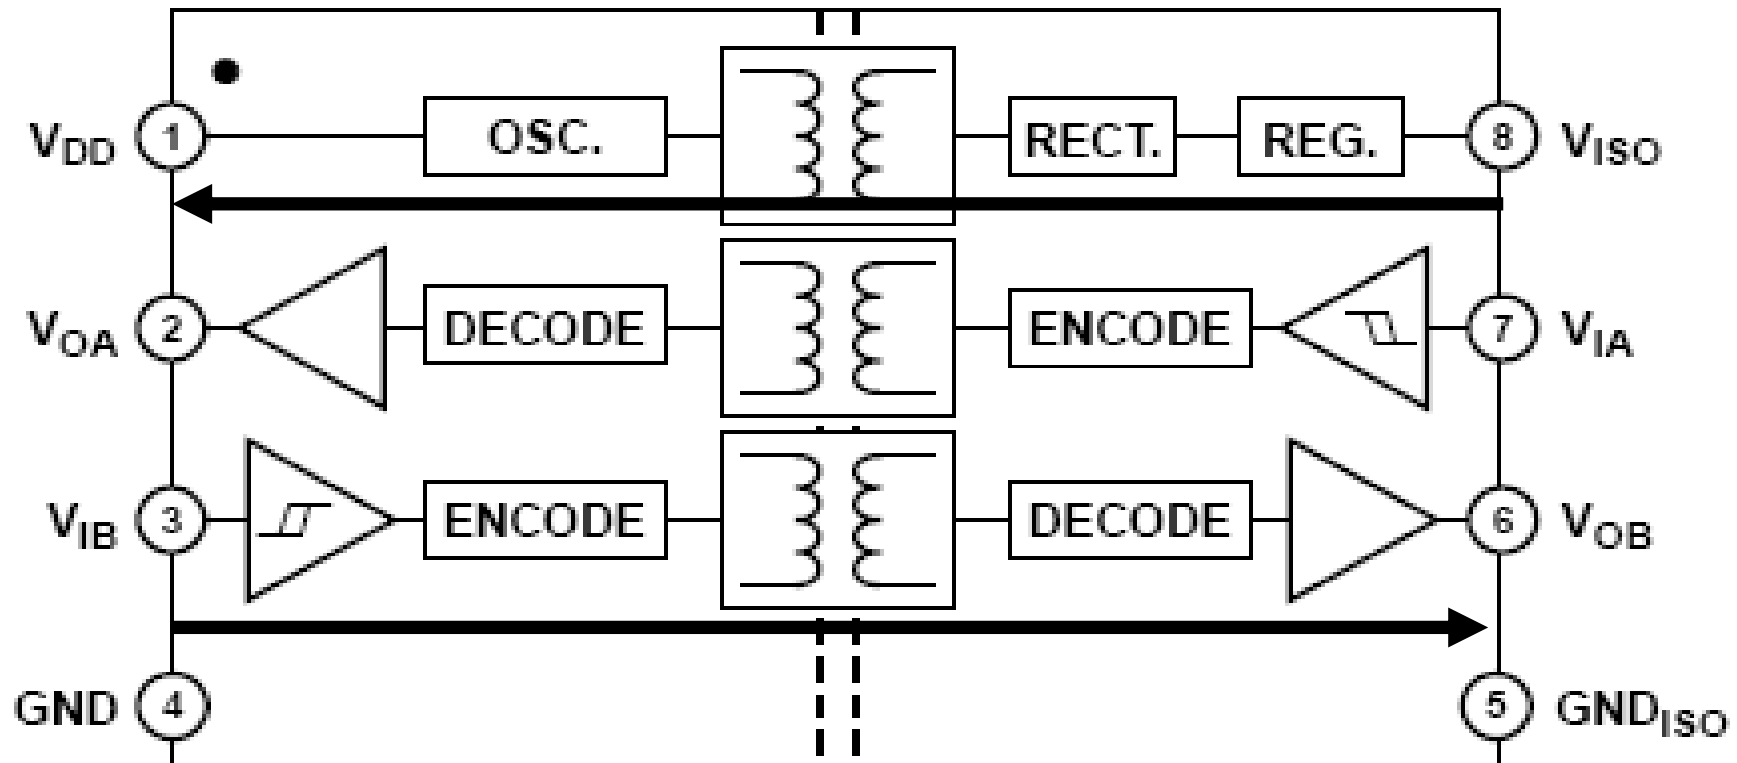

- the entire system (block diagram)
- moduls of the system
 - Galvanic seperation
 - Sensorsignlas conversion
 - Transmiting
- typical Aplication
 - Example Aquaculture plant
- questions

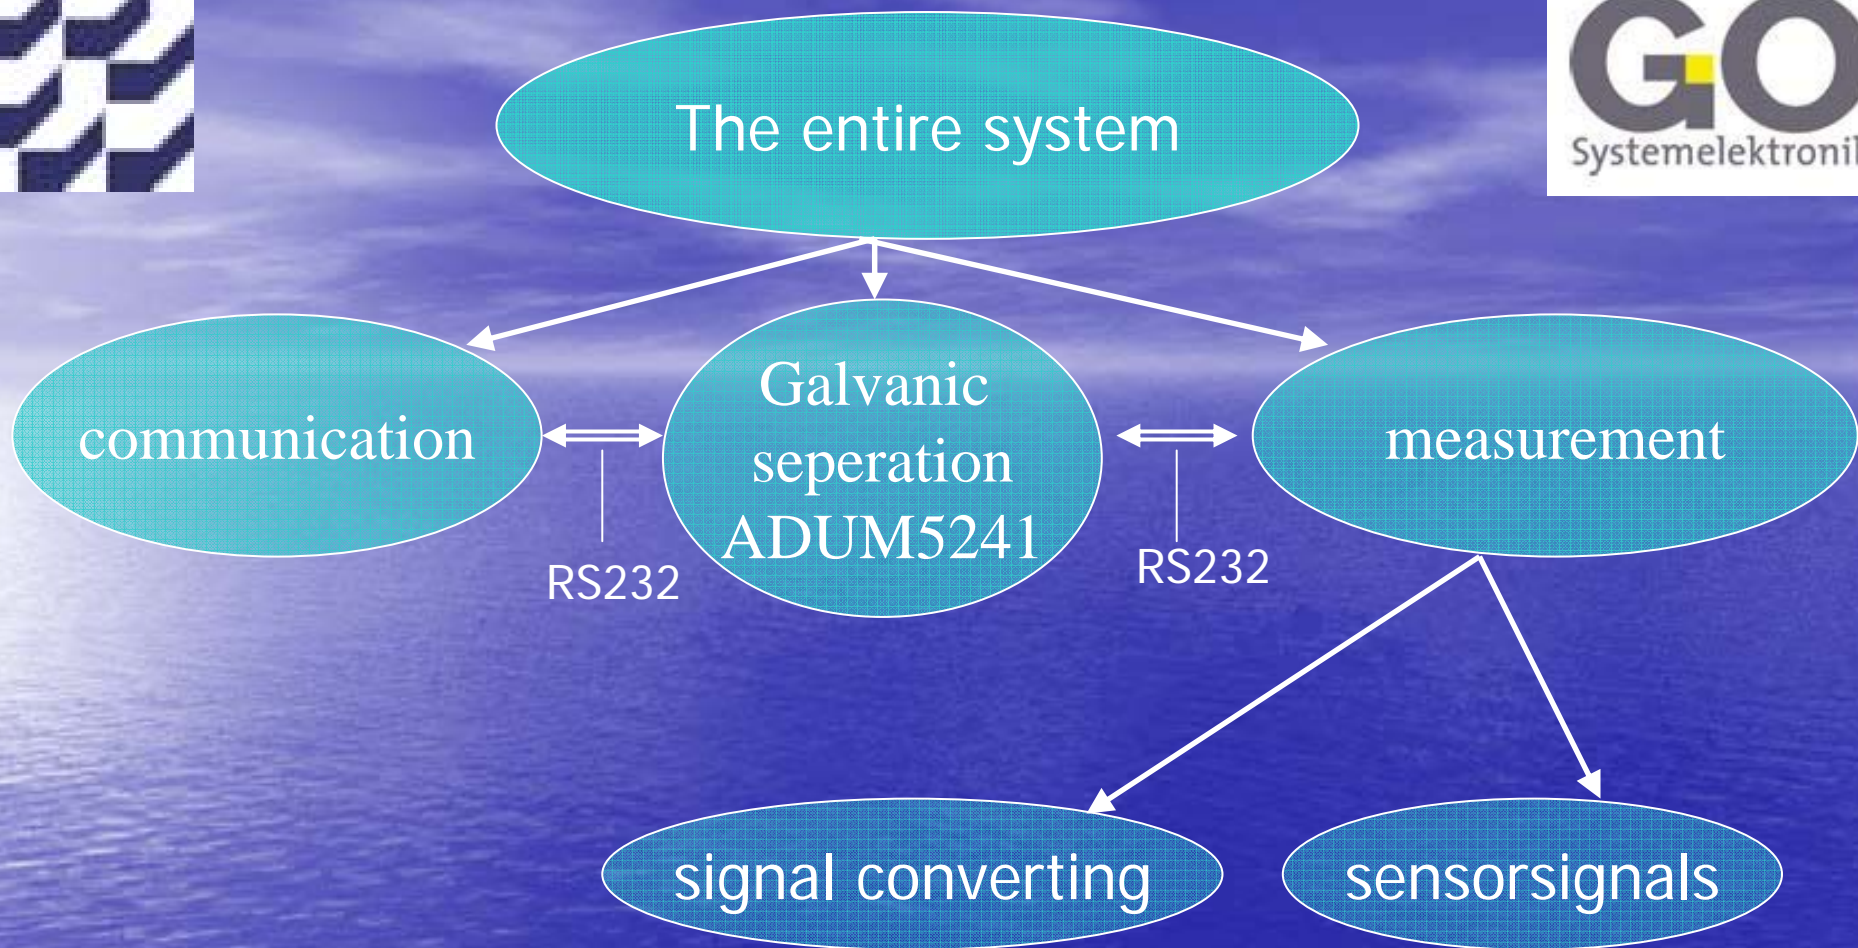

The entire system

The entire system

origin: www.analog.com

The entire system

temperatur sensor

O2-sensor includes a
NTC for temperatur
measurement

O2-sensor

Analog voltage
from 0 mV to 20 mV

signal converting

sensorsignals

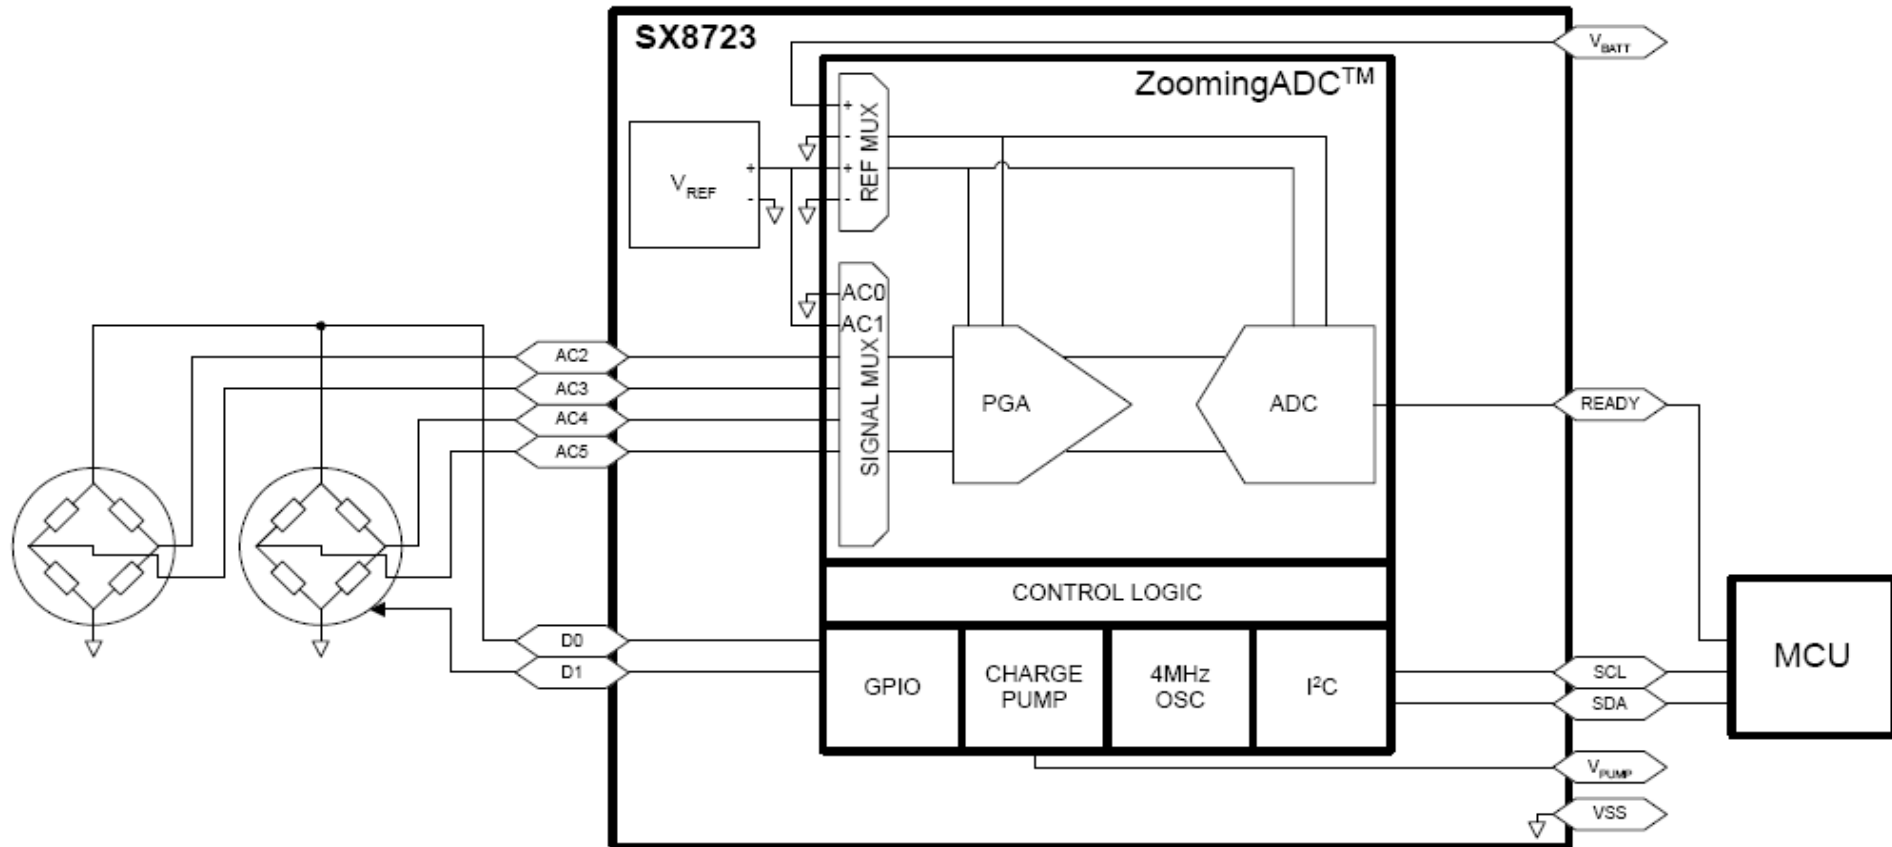

O2-sensor

Temperatur sensor

The entire system

origin: www.semtech.com

Temperatur sensor

ATtiny2313 (Atmel)

- consumption 230 μ A
- internal Calibrated Oscillator
- full Duplex USART
- I²C-Interface

- only two wires required
 - SDA (data)
 - SCL (clock)
- I²C speed up to 400kHz

entire system

(Meshnetics)

- low-power consumption (20 mA TX/RX)
- tree, star, mesh network
- High sensitivity (104 dB Link Budget)

ata Rate

z Channel Spacing)

Temperatur sensor

Aquaculture plant

Router node

Sensor node

Coordinator
(Control Room)

Are there any questions you
want to ask?

Thanks to:

- Dr. H. Dispert
- Dr. T. Knutz
- degreed engineer C. Witthandt
